

SURAKSHA AI

Women's Personal Safety App

Complete User Guide — Everything you need to know to stay safe with Suraksha AI's 10 AI-powered agents.

10 AI Agents

24/7 Monitoring

100% Private

Table of Contents

1	Getting Started — First Time Setup
2	Home Screen — Your Safety Dashboard
3	Suraksha Chat — Talking to the AI
4	Emergency Features — SOS, Code Word, Voice ID
5	The 10 AI Agents — What Each One Does
6	Fake Call — Escape Uncomfortable Situations
7	Location Tracking — Share Your Location
8	Evidence Recording — Secure Audio Backup
9	Settings Guide — Personalise the App
10	Emergency Numbers — India Quick Reference

1. Getting Started

First Launch

When you open Suraksha AI for the first time, a short setup flow guides you through granting the necessary permissions. These are required for the app to keep you safe.

Step 1	Allow Location (All the time) Suraksha needs your GPS to share your live location with trusted contacts during an emergency.
Step 2	Allow Microphone Used by the Threat Detection Agent to listen for screams or panic sounds. Also used for voice authentication and fake calls.
Step 3	Allow Phone Calls Needed to directly call your saved emergency contacts by voice command.
Step 4	Allow SMS Sends SOS text messages with your location to trusted contacts when an emergency is detected.
Step 5	Disable Battery Optimization CRITICAL — Your phone's battery saver kills background apps. Follow the on-screen instructions to exempt Suraksha from this so monitoring never stops.

Login / Sign Up

Suraksha supports both Phone OTP login and Email/Password login. Use whichever is easier for you — they both give the same features.

Phone OTP	Email / Password
1. Enter your phone number 2. Tap Sign Up / Login 3. Enter the 6-digit OTP from SMS 4. You're in!	1. Enter your name + phone (for tracking) 2. Enter your email and password 3. Tap Sign Up / Login 4. Done!

2. Home Screen

The home screen is your safety dashboard. It shows your current status, monitoring toggle, heart rate, SOS button, and quick access to all features.

-  ● **ACTIVE / INACTIVE toggle**
Tap to start or stop background safety monitoring. When ACTIVE, all 10 agents are running silently.
-  **Red SOS button**
Tap once to start a 30-second countdown. Tap again or say 'cancel' to stop. If not cancelled, sends emergency alerts with your live location.
-  **Heart rate display**
Shows your real-time heart rate if a compatible Bluetooth watch is connected. A spike can auto-trigger the SOS.
-  **Blue Suraksha button**
Opens the AI chat where you can talk to all 10 agents, run commands, or ask for help.
-  **Settings icon (top right)**
Opens app settings — add contacts, set code word, enroll voice ID, and more.

TIP: Keep monitoring ACTIVE whenever you travel alone at night or are in an unfamiliar area. The app uses very little battery when you're still — it only becomes more active when movement or audio anomalies are detected.

3. Suraksha Chat

The chat is your main way to interact with Suraksha AI. Just type or speak naturally — the app understands Hindi, English, and Bengali phrases.

What You Can Type

Command	What Happens
'I feel scared'	EmotionalSupportAgent gives calming guidance
'Find nearest police'	Shows 3 nearest police stations with Maps links
'Find nearest hospital'	Shows hospitals within 2km
'Fake call from Mom'	Generates a fake incoming call from Mom
'Start recording'	EvidenceCollectionAgent starts recording audio
'Call Dad'	Dials your Dad's number from saved contacts
'Share my location'	Sends your live location to all trusted contacts
'Battery'	Shows your current battery percentage
'Where am I'	Shows your current GPS coordinates + nearby safe places
'Check this: [message]'	CyberHarassmentAgent analyses the message for threats
'Send SOS'	Starts emergency cascade — alerts contacts + records evidence
'Cancel'	Cancels any active SOS countdown
'Show my contacts'	Lists all your saved emergency contacts
'Safe route home'	Plots the safest (not shortest) route home

4. Emergency Features

SOS Button

The red SOS button on the home screen is your fastest path to help. It starts a 30-second countdown giving you a chance to cancel if it was accidental. If not cancelled, it triggers the full emergency cascade:

- Records audio and uploads it to secure cloud storage
- Sends SMS to ALL your trusted contacts with your live Google Maps location
- Finds nearest police station and hospital automatically
- Starts continuous location tracking uploads every 15 seconds
- 2 minutes later, EmotionalSupportAgent checks on you

To cancel: Say 'cancel', type 'cancel', or type 'I am safe' within 30 seconds.

Code Word (Silent SOS)

Set a secret code word in Settings that no one else knows. When you say it out loud near your phone, Suraksha silently activates all agents without anyone around you knowing you called for help.

- **Normal voice:** Activates agents silently — no sound, no notification shown on screen
- **Shouting / screaming:** Triggers panic mode — immediate full emergency cascade, no countdown

IMPORTANT: Choose a code word that is at least 3 words long and something you would never say in normal conversation. For example: 'Suraksha bachao mujhe' or 'Help suraksha now'. A single common word like 'help' will trigger false alarms.

Voice ID

Enroll your voice in Settings → Voice ID. Once enrolled, only YOUR voice can trigger the code word — protecting against false triggers from TV, radio, or other people accidentally saying your code word.

1. Go to Settings → Voice ID
2. Tap 'Enroll Voice' and say your code word 3 times when prompted
3. The app creates a voiceprint stored only on your device — never uploaded
4. Future code word triggers are verified against this voiceprint

5. The 10 AI Agents

Suraksha AI has 10 specialised agents running silently in the background. Each agent handles a specific type of safety task. They work together automatically — you don't need to manage them.

■ Threat Detection Agent

Listens to audio through the microphone to detect screams, panic sounds, or sudden loud impacts. If detected, it raises the threat level and can trigger the SOS cascade automatically.

Trigger: 'start monitoring' or 'monitor audio'

■ Smart SOS Agent

The core emergency agent. When triggered, it sends rich SMS alerts to all your trusted contacts containing your live Google Maps link, your name, and a message asking them to check on you.

Trigger: 'send SOS' or tap the red button

■ Safe Route Agent

Plans the safest route home — not the shortest one. Avoids poorly lit areas, narrow lanes, and known unsafe zones. Opens in Google Maps with the recommended route highlighted.

Trigger: 'safe route home' or 'navigate home safely'

■ Evidence Collection Agent

Silently records audio in 30-second chunks and uploads each chunk to secure cloud storage (Supabase). Evidence is safe even if your phone is taken, since files are already uploaded.

Trigger: 'start recording' | Auto: triggers on HIGH threat

■ Fake Call Agent

Generates a convincing fake incoming call. You pick the caller name (Mom, Dad, Rahul, etc.) and language (English/Hindi/Bengali). A realistic voice speaks a worried script through your speaker.

Trigger: 'fake call' or 'fake call from [name]'

■ Behavior Prediction Agent

Analyses your movement patterns to detect if someone might be following you. If you keep stopping and someone stops too, it raises the alert level and notifies you.

Trigger: 'is someone following me' or 'stalking' | Auto: on unusual patterns

■ Nearby Guardian Agent

Finds police stations, hospitals, pharmacies, fire stations, and ATMs within 2km using OpenStreetMap data. Results include distance, walking time, and a direct Maps link.

Trigger: 'find nearest police' or 'find hospital nearby'

■ Cyber Harassment Agent

Analyses threatening or abusive messages. Paste any suspicious text and it scores severity (1-10), identifies the type of harassment, and tells you exactly what to do.

Trigger: 'check this: [message]' or 'analyse this message'

■ Emotional Support Agent

Provides warm, calm guidance after stressful or scary situations. Powered by Groq AI (Llama 3). Offers grounding techniques and crisis helpline numbers if needed.

Trigger: 'I feel scared', 'I need support', or 'I'm anxious'

■ Activity Recogniser Agent

Continuously detects your physical activity — STILL, WALKING, CYCLING, RUNNING, or VEHICLE. This context helps other agents understand your situation better.

Trigger: 'what am I doing' | Auto: runs continuously

6. Fake Call

The Fake Call feature lets you escape uncomfortable situations — like when someone is making you uncomfortable and you need an excuse to leave.

How to Use

Step	Detail
Type in chat	'fake call from Mom', 'fake call from Dad', 'fake call from Rahul'
Language pick	The app asks: English / Hindi / Bengali — reply with 1, 2, or 3
Incoming call	Full-screen incoming call appears with avatar, vibration, and ringtone
Answer	Tap the green button — a realistic TTS voice starts speaking the script
The caller	Sounds worried: 'Where are you? I've been waiting outside for 15 minutes...'
Natural pauses	3-second pauses between lines so it sounds like you're replying
End call	Tap the red hang-up button when you're safely away

Gender Auto-Detection

The app automatically chooses a male or female voice based on the caller name:

Male Voice (lower pitch)	Female Voice (higher pitch)
Dad, Baba, Bapi, Papa, Bapu Rahul, Rohan, Arnab, Amit Bhai, Dada, Uncle	Mom, Maa, Mamoni, Dida Priya, Neha, Didi, Puja Auntie, Sister

SHORTCUT: Say 'fake call from Dad in Hindi in 10 seconds' — all details in one command, no follow-up needed!

7. Location Tracking

Suraksha uploads your GPS location to a secure server every 15 seconds when monitoring is active. Your trusted contacts can view your live location by opening the tracking link sent during an SOS.

GPS Accuracy	Only accurate GPS fixes (within 50 metres) are uploaded. Network/WiFi location is ignored to prevent incorrect location data.
Update Rate	Every 15 seconds when moving. Less frequent when still to save battery.
Who Can See It	Only your saved trusted contacts, and only during an active SOS event.
Stale Warning	The tracking screen shows a red warning if location hasn't updated in 5+ minutes, so your contact knows to call you directly.
Battery Impact	GPS uses about 3-5% battery per hour. Disable monitoring when at home to conserve battery.

IMPORTANT: For location tracking to keep working after your phone is locked or screen turns off, you **MUST** disable battery optimization for Suraksha AI. Go to: Settings > Battery > App Management > Suraksha AI > No Restrictions.

8. Evidence Recording

The Evidence Collection Agent records audio in 30-second chunks and uploads each chunk to secure cloud storage (Supabase) immediately after recording. This means evidence is safe even if your phone is taken from you.

- Type 'start recording' to begin manually
- Triggers automatically when a HIGH threat level is detected
- Each 30-second chunk is uploaded before the next one starts
- Files are stored for 72 hours then auto-deleted for your privacy
- Type 'recording status' to see how many chunks have been uploaded
- Type 'stop recording' to end the session

PRIVACY NOTE: Audio files are uploaded to a private Supabase Storage bucket. They cannot be accessed by anyone without your account credentials. No raw audio is ever stored on your device after upload.

9. Settings Guide

Trusted Contacts

Add the people who should receive your SOS alerts. Include their name and phone number. You can add up to 5 contacts. Use names like 'Mom', 'Dad', 'Bhai' so voice commands work.

Code Word

Set your secret trigger word — at least 3 words, something unique. Tap 'Set Code Word', type your phrase, tap Save. Test it by saying it aloud.

Voice ID

Enroll your voice so only you can trigger the code word. Tap 'Enroll Voice', say your code word 3 times clearly. The voiceprint is stored only on your device.

Battery Optimization

If the app shows a battery optimization warning, tap 'Fix it now' and follow the on-screen steps for your phone brand (Vivo, Samsung, Xiaomi, etc.).

Download User Guide

Downloads this PDF guide to your Downloads folder so you can read it anytime, even without internet.

10. Emergency Numbers — India

These numbers work from any mobile phone in India, even without a SIM balance. Save them in your contacts or memorise the key ones.

100	Police
101	Fire
102	Ambulance (some states)
108	Emergency Ambulance
112	National Emergency Number
1091	Women Helpline
1098	Child Helpline
181	Women Helpline (some states)
9152987821	iCall Mental Health
1860-2662-345	Vandrevala Foundation (24/7)

Remember: In any emergency, your safety comes first. Trust your instincts. If something feels wrong, it probably is. Suraksha AI is always here for you. Stay safe. ■
